¹⁾ Following the recommendation of the Expert Meeting on Fishery Statistics, 1959, which has been endorsed by ICNAF, the term "Subdivision" will be replaced by the term "Division".

FOREWORD

Vessels of all member countries have fished in the Convention Area during 1958 and, but for Italy¹⁾, have reported their statistical material to the Commission. This material is presented here in a standard form with all weights being given in metric tons of round fresh fish (i.e. the nominal catch). The conversion factors used to convert from landed weight to nominal catch are given on page 11 and are the same as were used last year.

A map of the North West Atlantic showing ICNAF Subareas and Divisions is on page 6.

As before, the Bulletin is in two parts. Part I summarizes the statistics on landings of the past seven years and Part 2 gives the tables of statistics dealing with the fisheries in the Convention Area in 1958. A few corrections to the Statistical Bulletin are contained in an Appendix.

RONALD S. KEIR

PART 1

The Fishery In The Convention Area In 1958

R. S. KEIR

In 1952 the following ten countries were fishing in the Convention Area: Canada, Denmark, France, Iceland, Italy, Norway, Portugal, Spain, the United Kingdom, and the United States. In 1953 Germany began fishing; in 1956 the U.S.S.R. (after carrying out exploratory and survey cruises in 1955) began its commercial fishery in the area; in 1958 vessels from eastern Germany began fishing; and in 1959 Belgium, Cuba and Poland sent their first vessels to the area to fish. The main species sought by the new countries have been the redfish and the cod—especially the redfish. The number of countries fishing in the area may continue to increase, as both Greece and Brazil have shown interest in developing fisheries in the Convention Area.

The total landings from the Convention Area in 1958 amounted to 1,998 thousand tons, round fresh weight (the nominal catch), compared to 1,979 thousand tons in 1957 and 1,934 thousand tons in 1956. This increase in total landings was due entirely to increased landings of redfish (up by 166 thousand tons), which compensated for declines in the landings of cod (down by 77 thousand tons), haddock (down by 33 thousand tons), "other" (down by 17 thousand tons), and shellfish (down by 23 thousand tons). The increase in total landings was apparent in Subareas 1, 2 and 4, while decreases were recorded from Subareas 3 and 5. Cod is the most important species landed from the Convention Area, contributing 44 percent of the total. Haddock is now third in importance with 7 percent, while redfish, with 16 percent, is second in importance. A summary of the total landings by species groups, countries, and subareas for recent years¹⁾ is given below (Table A). The 1958 landings by species are given in Table 7.

1) A recently discovered error in the United States statistical submission for 1955 has been corrected in this table - see Appendix, paragraph A3. The starred figures have been amended.

2) The Italian landings for 1958 have not been included in this table (see Appendix II, page 69).

Table A: Total Landings from the Convention Area by Countries and Subareas (1954-1958), and by Species (1952-1958).

Cod

Total cod landings fell in 1958 by 8 percent, in spite of an overall increase in the fishing effort (see Statistical Bulletin Vol. 7). The average catch per unit of fishing effort fell in each of Subareas 1, 2, 3, and 4, which are the main cod-producing areas. However, the decline in landings was restricted to Subarea 3 and was mainly the result of the relative failure of the Newfoundland inshore fishery.

In the other subareas landings of cod were up, as increased fishing effort compensated for the decline in the catch per unit effort. The landings from Subarea 1 showed a 19 percent increase and were, except for 1956, the highest

in the six-year period 1953-1958. The landings from Subareas 4 and 5 were the highest recorded for this period.

In 1958 Canada continued to take the largest share of the catch (34 percent), followed by Portugal (20 percent), France (14 percent), Spain (11 percent), Denmark (8 percent), Norway (5 percent), Germany (4 percent) and the United States (2 percent). All other countries together took 3 percent.

Table B: Cod Landings by Countries and by Subareas (1952-1958)

Haddock

Haddock landings in 1958 were the lowest since 1953. The decline of 19 percent in the total haddock landings was shared by all countries taking part in the fishery. However, the haddock landings of 49 thousand tons from Subarea 4 were a little above those of 1957. The relative position of the various countries did not change, and no new countries have developed fisheries for haddock in this area in the past seven years. The total catch is shared among Canada (Mainland) with 29 percent, Canada (Newfoundland) with 12 percent, France (St. Pierre) with 2 percent, Spain with 15 percent, and the United States with 41 percent. All other countries combined report less than 1 percent.

Substantial landings of haddock were made only from Subareas 3, 4 and 5; and while the landings from Subarea 3 have varied greatly

in recent years, the landings from Subareas 4 and 5 have maintained a certain degree of stability.

Table C: Haddock Landings by Countries and by Subareas (1952-1958).

Redfish

Of all fisheries in the Convention Area, the redfish fishery has shown the most striking development in recent years. The fishery began in 1934, and landings increased fairly rapidly to a total of about 100 to 120 thousand tons in 1950 and held more or less steady until 1957, when an increased U.S.S.R. fishery moved the total up to 160 thousand tons, and this was increased to the 1958 total of 325 thousand tons by the expanded fisheries of U.S.S.R., Iceland and Germany. The redfish landings therefore now far exceed that of any other species except cod. This increase in the catch is due entirely to increased fishing effort and to the exploitation of new fishing grounds which have been discovered and explored in recent years, and is not due to any increase in the catch per unit effort on the older fishing grounds. The total catches from Subareas 4 and 5, where the redfish fishery was first developed, remained steady, and the increase in total landings was due solely to increases in the landings from Subareas 2 and 3.

The total catch of redfish by Canada and the United States, the other two countries exploiting the redfish, and the first in the field in this area, have remained fairly steady in recent years, although both reported small increases in their landings in 1958.

In 1958, 6 percent of the redfish came from Subarea 1, 24 percent from Subarea 2 (a new fishery), 49 percent from Subarea 3, 17 percent from Subarea 4, and 5 percent from Subarea 5. Canada took 8 percent of the redfish in 1958, West Germany 11 percent, Iceland 25 percent, U.S.S.R. 33 percent, the United States 21 percent, and all other countries together 1 percent.

Halibut

Halibut landings of 6 thousand tons were slightly below those of 1957, but were still far above those of the period 1952-1956. Most of the catch is taken by Canada (67 percent) and Norway (21 percent).

The landings from Subarea 1 have increased since 1952, due mainly to increases in the Norwegian fishery, which compensated for a decline in the British and Danish fisheries. The landings from Subareas 3 and 4 have also increased quite markedly in recent years, due largely to increased Canadian landings. In 1958 21 percent of the landings came from Subarea 1, 1 percent from Subarea 2, 34 percent from Subarea 3, 42 percent from Subarea 4, and 1 percent from Subarea 5—about the same proportions as in previous years.

74	Seaweed	—	Rhodymenia, Chondrus, Laminaria etc.

1. For statistical purposes fish are grouped in this Bulletin as Cod, Haddock, Redfish, Halibut (all Group G, Groundfish), Flounders (F.), Other Groundfish (O.G.), Pelagic Fish (P.F.), Other Fish (O.F.), Shellfish (S.F.).
2. The inclusive term "Sharks" is used in this number of the Statistical Bulletin for all species of sharks.

PART 2

Statistics For 1958

INTRODUCTION

The presentation of the basic statistical data has again been designed to place emphasis on area and month of fishing. Table 1 presents in an easily accessible form a summary of all the landings by country and statistical division¹. Tables 2-6 are synoptic tables of the landings of cod, haddock, redfish, halibut, and flounder respectively for each kind of gear in each month/division. Table 7 gives the total quantity of each species landed in each subarea. Table 8 includes all the basic statistics for 1958 on fishing effort and on the landings of cod, haddock, redfish, halibut, the flounder group, and the other fish group that were reported according to the Commission's statistical requirements. A summary of the national statistics is given in Table 9 and this table also includes certain supplementary information which was reported by the member countries.

All figures on landings are given in metric tons round fresh, i.e. the nominal catch.

The abbreviations and conversion factors used for this Statistical Bulletin are given below.

"Main Species" means the species sought.

Abbreviations Used

NK	=	Not Known, e.g. in Table 8, NK is used to indicate month not known.
—	=	Nil or less than one half of the unit used.
...	=	Data not reported.
Canada(M)	=	Canada (Maritimes & Quebec) = Canada Mainland
Canada(N)	=	Canada (Newfoundland)
Denmark(G)	=	Denmark (Greenland)
Denmark(F)	=	Denmark (Faroes)
Franco(St. P. & M.)	=	France (St. Pierre & Miquelon)

CONVERSION FACTORS USED FOR THE 1958 STATISTICS

The conversion factors are the same as those used last year. Different conversion factors are not used unless experimental observations indicate that they are required.

Conversion factor from 1000 lbs. to 1 metric ton = 0.454

Condition Landed	Species	Country	Conversion Factor to Round Fresh	Condition Landed	Species	Country	Conversion Factor to Round Fresh	
Green Salt, Wet	Cod	Denmark(Faroes), France, Iceland, Italy, Norway, Portugal, Spain, United Kingdom.	3.0	Gutted, Head Off	Dogfish	U.S.	1.2

1) These United Kingdom nominal catches are made by factory trawlers, and the month reported is the month of landing, not the month of capture. The trips concerned spread over about three months. In future Statistical Bulletins it is expected that the nominal catches will be allocated by month of capture as well as area.

2) Partly 1B-1F.

3) From 1D-1F.

4) From 1B-1F.

5) 1B or 1D.

6) 2J or 3K.

7) 3L, 3O or 3N.

8) 3O or 3P.

9) Possibly mostly from 3P.

10) Non-groundfish.

11) Largely non-groundfish.

*Partly estimated in the Secretariat.

1) "Mixed" refers mostly to cod, haddock, flounders, and "other groundfish."

2) Where these data are not reported for all vessels of a class for the whole year, totals are not given here.

TABLE 9. (Cont'd) SUMMARY OF LANDINGS AND FISHING EFFORTS BY COUNTRY, GEAR AND SUBAREA—1958.

CANADA (Newfoundland)

Landings in Metric Tons Round Fresh.

Vessel or Gear Class	Main Species	Tonnage Class	Sub-Area Fished	Trips	Days on Grounds	Days Fished	Sets or Drags	Hours or 1000 Hooks Fished	Cod	Had-dock	Red-fish	Hali-but	Flound-er	Other Fish	Total

1) The following breakdown by gear has been provided by the Department of Fisheries. The estimates are approximate, and the same breakdown is made for 1956, 1957 and 1958:

Gear	3K	3L	3P	4R
Cod Trap	65%	60%	10%	30%
All other (Jigger, Baited Handline, etc.)	35%	40%	90%	70%

CANADA (Newfoundland) (Cont'd)

SPECIAL EFFORT DATA.

This table continues a series of data published in the Statistical Bulletins since Volume 4. The effort recorded for a particular species is actual effort toward the catch of that species, other species caught being incidental.

APPENDIX

I. Corrections to Earlier Statistical Bulletins

A. Statistical Bulletin Vol. 5, 1955

1. Page 31, Table 8, 30, December: Otter Trawlers, Spain should be 901-1800 tons.
2. Page 49, Table 9, Denmark (Greenland): The following explanatory note was omitted: "The total of 24,480 tons includes landings of 565 tons of prawns (*Pandalus* sp.)."
3. The landings of the United States inshore fisheries were unfortunately **not** included in the United States statistics. These comprise the landings given below, which should be added to the 1955 statistics as reported in ICNAF Statistical Bulletin Vol. 5.

Also, in Table 7 of Vol. 5, 31,019 metric tons should be transferred from the Subarea 5 figure for 'Species not Known' of Other Groundfish to 'Menhaden'.

FISH CATCH BY MISCELLANEOUS GEARS, 1955

Subarea 5

Landings in Metric Tons Round Fresh.

Cod	209	Pelagic Fish	
Haddock	4	Bluefish	23
Flounders		Herring	45,597
Yellowtail	2	Mackerel	598
Blackback	1	Menhaden	4,584
Fluke	66	Tuna	389
Total Flounder	69	Total Pelagic Fish	51,191
Other Groundfish		Other Fish	
Dogfish	1	Alewives	2,877
Scup	1,743	Butterfish	468
Pollock	131	Eels	36
Silver Hake	210	Launce	107
Red Hake	3	Squetegues	2
Sea Bass	161	Shad	12
Sea Robin	3	Smelt	61
Species not Known	663	Striped Bass	44
Total Other Groundfish	2,915	Tautog	20
		Total Other Fish	3,627

B. Statistical Bulletin Vol. 6, 1956

1. Portugal, Dory Vessels: In the 1955 (and earlier) Statistical Bulletins, the Portuguese Dory Vessels were classified as (i) Sailing, (ii) Motor Vessels without Refrigeration and (iii) Motor Vessels with Refrigeration.
With the growing use of refrigeration, class (ii) above was virtually eliminated, and in 1956, 1957 and 1958 the motor vessels were reclassified as (ii) Sail with Auxiliary Motor and (iii) Motor.
This change was not recorded in the 1956 and 1957 Statistical Bulletins; accordingly all references to Dory Vessels as "Motor Vessels without Refrigeration" should read "Sail with Auxiliary Motor."
2. Page 56, Table 9, Portugal: Under Vessel Type and Tonnage Class, Motor with Refrigeration, 151-500 should read 501-900 tons, and 501-900 should read 901-1800 tons.
3. Page 29, Table 8, INK, Month not Known: The data recorded under "Days Fished" for Faroese vessels should have been recorded as "Days on Grounds."

C. **Statistical Bulletin Vol. 7, 1957**

1. See correction (1) above to Vol. 6, which also applies to Vol. 7.
2. See correction (3) above to Vol. 6, which also applies to Vol. 7 (pages 34-35, Sub-division 1NK). This correction should also be made in Vol. 7, Table 9, page 64. In addition, in Table 8 the data recorded as "Days Fished" for Icelandic Vessels should have been recorded as "Days on Grounds."
3. Page 50, Table 8, 4V, May, Long Liners (Halibut), 51-150 tons: Under the number of "Hooks Fished (1000)", 2,647 should read 265.
4. Page 58, Table 8, 5Z, January, Long Liners, United States: Delete 30 tons under "Other" and insert 30 tons under "Total".
5. Page 66, Table 9, United States: Otter Trawlers, 0-50 tons should be under Subarea 5, not Subarea 4.

II. Italian Landings in 1958

The following landings were reported at the 1960 Annual Meeting by the Italian Commissioner:

Cod, metric tons round fresh		
Subarea 1	—	1100
" 2	—	400
" 3	—	800
" 4	—	900
Total		
		3200

These figures are not included in Tables 1-8 of this Bulletin.
