

NORTHWEST ATLANTIC FISHERIES ORGANIZATION

Statistical Bulletin
Vol. 33

Fishery Statistics for 1983

Dartmouth, Canada
December 1985

Preface

The ICNAF Statistical Bulletin, which has been published annually since 1951, terminated with the issue in 1981 of Volume 28 containing fishery statistics for the calendar year 1978. At its June 1980 Meeting, the Scientific Council of NAFO agreed that publication of fishery statistics for the Northwest Atlantic (Subareas 0 to 6) should be continued in the same general format as the most recent issues of the ICNAF publication. Consequently, the first issue of NAFO Statistical Bulletin, containing fishery statistics for 1979, was numbered Volume 29.

The fishery statistics presented in the Bulletin represent commercial catches from the marine finfish, invertebrate and seaweed resources of the NAFO Convention Area, as well as the catches of harp and hooded seals. The data are derived from STATLANT 21B reports submitted by member countries of NAFO and by non-members which conducted significant fishing operations in the Northwest Atlantic during 1983. Data on quantities of fish and invertebrates are presented as "nominal catches" (i.e. live weight equivalent of the landings) in metric tons, data for seaweeds are given as wet weight in metric tons, and catches of seals are given as numbers of animals. The statistics are presented on a calendar year basis and by month where applicable.

The tabular presentation of the data generally follows the formats previously established for use in the ICNAF publication, except that Tables 5 and 6 of Part II have been replaced by a new Table 5 for presenting the detailed catch and effort data, as recommended at the September 1980 Meeting of the Scientific Council.

This issue of the Bulletin is set out in four parts: **Part I** contains summaries of catches of selected finfish and invertebrate species by country and subarea for the 1969-83 period; **Part II** contains statistics of nominal catches and fishing effort for 1983; **Part III** contains the seal catches and hunting effort for 1983; and **Part IV** contains corrections to Statistical Bulletin Vol. 32 for 1982. In tables where various groups of species are used, the groups and group names are in accordance with those given in the List of Northwest Atlantic Species. Further details of the tabular presentation of the data are given in the text at the beginning of each Part and in the section entitled "Definitions and Abbreviations".

The Secretariat is pleased to acknowledge the efforts of countries through their statistical agencies in maintaining records of their fisheries in the Northwest Atlantic and contributing the data for publication in the Bulletin. In addition, the guidance of the Scientific Council and its Standing Committee on Research Coordination and the Coordinating Working Party on Atlantic Fishery Statistics has been invaluable.

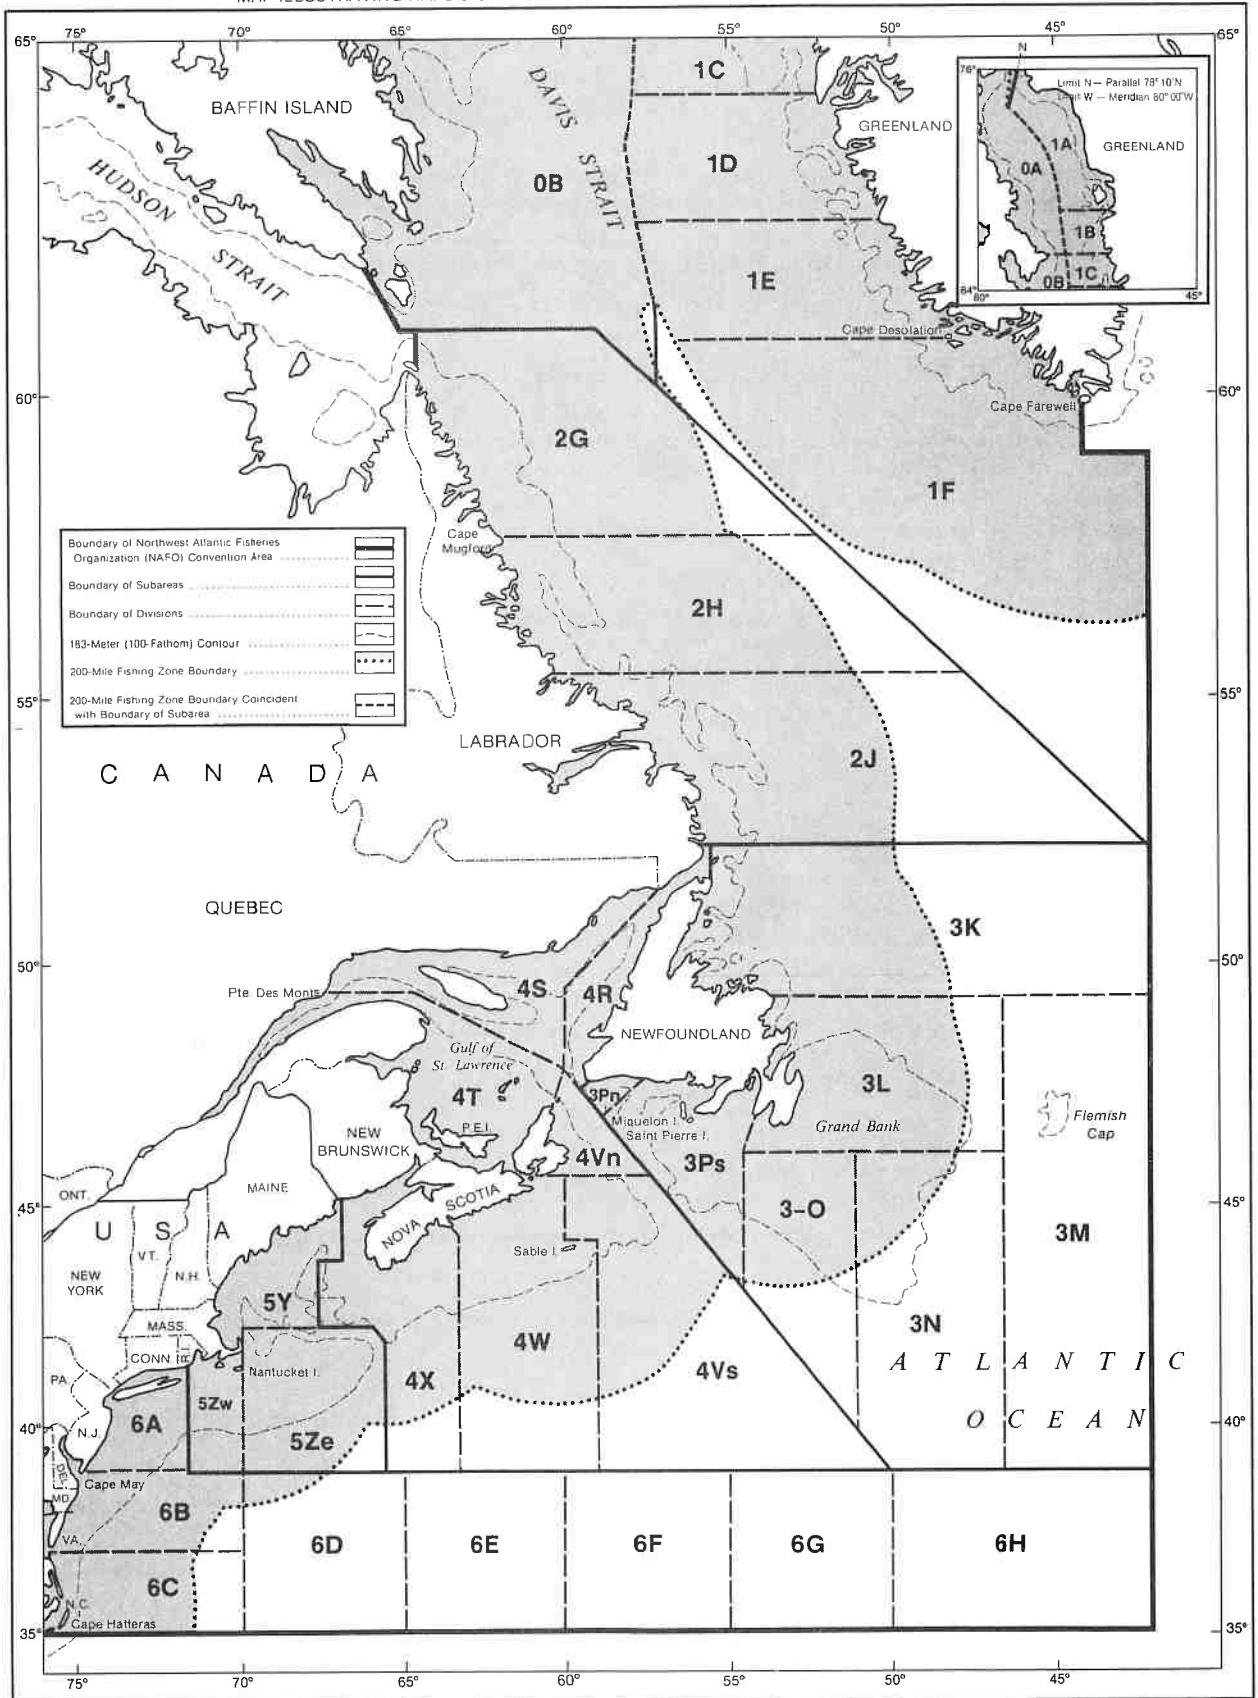

Most of the tabular material in this issue of the Bulletin was prepared directly from computer compilations, utilizing the IBM 370 computer of Maritime Computer Services Ltd., Halifax, Nova Scotia, accessed through the Secretariat's own computer terminal. The preparation and printing of the Bulletin was carried out by the Secretariat staff.

The delayed publication of this issue (Vol. 33) was due to the very late receipt of fishery statistics for France.

NAFO List of Species Items

The list of common and scientific names of species items for the Northwest Atlantic, together with the standardized 3-alpha identifiers, includes all species for which nominal catches have variously been reported. The order of presentation of the catches by species and by species groups (groundfishes, pelagic fishes, other finfishes, invertebrates, and seaweeds and seals) in the various tables of Parts I, II and III of the Bulletin corresponds with the order in the following list, where applicable.

NAFO Code	Common English name	Scientific name	3-alpha ident.
Groundfish			
101	Atlantic cod	<i>Gadus morhua</i>	COD
102	Haddock	<i>Melanogrammus aeglefinus</i>	HAD
103	Atlantic redfishes (NS)	<i>Sebastes</i> sp.	RED
104	Silver hake	<i>Merluccius bilinearis</i>	HKS
105	Red hake	<i>Urophycis chuss</i>	HKR

Fishing Effort Measures for Gear Categories

The Coordinating Working Party on Atlantic Fishery Statistics (CWP) at its Eighth Session in September 1974, reviewed the effort units that could be applied to most of the major gear categories in the FAO International Standard Statistical Classification of Fishing Gear. The CWP recognized that there was a need for further research to determine the best effort units for some gears, but, pending the determination of better definitions, nevertheless recommended that regional organizations should select from the FAO list those fishing effort units most appropriate for statistical reporting in their respective regions. Consequently, the following expanded list of definitions of effort measures was adopted at the 1975 Annual Meeting of ICNAF and subsequently endorsed by the Scientific Council of NAFO for use in the national reporting of effort data on STATLANT 21B forms:

Effort level	Fishing gears	Effort measures	Definition
A.	Trawls	No. of hours fished	Number of hours during which the trawl was in the water (mid-water), or on the bottom (bottom trawl), and fishing.
	Boat seines (Danish seine, etc)	No. of hours fished	Number of hours during which the seine was on the bottom and fishing.
	Beach seines	No. of sets	Number of times the gear has been set or shot, whether or not a catch was made.
	Boat dredges	No. of hours fished	Number of hours during which the dredge was on the bottom and fishing.
	Surrounding nets (purse seines)	No. of sets	Number of times the gear has been set or shot, whether or not a catch was made.
	Gillnets (set or drift)	No. of effort units	Length of nets expressed in 100-meter units multiplied by the number of sets made (= accumulated total length, in meters, of nets used in a given time period divided by 100).
	Gillnets (fixed)	No. of effort units	Length of net expressed in 100-meter units multiplied by the number of times the net was cleared.
	Traps (uncovered pounds nets)	No. of effort units	Number of days fished times the number of units hauled.
	Covered pots and fyke nets	No. of effort units	Number of lifts times the number of units (= total number of units fished in a given time period).
	Longlines (set or drift)	Thousands of hooks	Number of hooks fished in a given time period divided by 1000.
	Handlines (pole, troll, jig, etc)	No. of line-days	Total number of lines used in the given time period.
	Harpoons	—	(Report effort levels B and C only.)

Effort level	Fishing gears	Effort measures	Definition
B.	All Gears	No. of days fished	The number of days (24-hour periods, reckoned from midnight to midnight) on which any fishing took place. For those fisheries in which searching is a substantial part of the fishing operation, days in which searching but no fishing took place should be included in "days fished" data.
C.	All Gears	No. of days on grounds	The number of days (24-hour periods, reckoned from midnight to midnight) in which the vessel was on the fishing ground, and includes in addition to the days fishing and searching also all the other days while the vessel was on the ground.

Abbreviations for Gears

The following standard abbreviations for gears, recommended by the CWP for use in regional and international statistical publications, were adopted at the 1975 Annual Meeting of ICNAF and used, where applicable, in all issues of Statistical Bulletin starting with Vol. 24:

Gear categories	Abbreviations
Trawls	
Bottom beam trawl	TBB
" otter trawl (side or stern not specified)	OTB

Nominal Catches

All catches recorded for finfish and invertebrate species items refer to "nominal catches", defined as the live weight equivalent of the landings. Seaweeds are reported on a "wet weight" basis, and seals are reported as numbers of animals.

Under the assumption that all national statistical reports are compiled in accordance with the instructions for completing STATLANT 21B forms, the nominal catches presented in Parts I and II of the Bulletin include all quantities used for human consumption and quantities utilized for industrial purposes (fishmeal production) but do not include quantities discarded (i.e. fish thrown overboard at sea).

PART I

Tabular Summaries of Nominal Catches, 1969–83

This section of the Bulletin contains summary tables of nominal catches by country and subarea for the years 1969 to 1983, continuing the series of similar tables in previous issues of the ICNAF Statistical Bulletin up to Vol. 28 and NAFO Statistical Bulletin Vol. 29–32. All adjustments to nominal catches, resulting from the addition of Subareas 0 and 6 at different times during the ICNAF regime and from the acquisition of fishery statistics for non-members of ICNAF until 1978 and of NAFO for 1979–83, have been incorporated into the statistical data base, and the summary tables now reflect the nominal catches for the whole of the Northwest Atlantic region, recognized by FAO as Major Fishing Area 21. All quantities in the summary tables are expressed in thousands of metric tons (round fresh weight).

Table A contains the nominal catches of all species items (finfishes, invertebrates and seaweeds) for the 1969–83 period by country and subarea and also the nominal catches of principal species and groups of species. Table B contains the nominal catches by country and subarea for the following selected species: Atlantic cod, haddock, Atlantic redfishes, silver hake, red hake, pollock, American plaice, witch flounder, yellowtail flounder, Greenland halibut, roundnose grenadier, wolffishes, Atlantic herring, Atlantic mackerel, capelin, shrimp and squids. The catches of the four principal flatfish species noted above include all adjustments resulting from the more refined breakdown of flounder statistics presented in Part IV of ICNAF Statistical Bulletin Vol. 23 for the years prior to 1972, as the statistics given in earlier issues of the Bulletin contained large quantities of unspecified flounders. When countries recorded very small catches over the entire time series, they have been included in the category "Others".

The symbols used in Tables A and B are defined as follows:

- + Magnitude of catch known to be less than 500 tons.
- Catch known to be zero.
- ... Data not available.

PART II

Fisheries Statistics for 1983

Source of Data

Fishery statistics pertinent to the NAFO Convention Area (FAO Fishing Area 21) for the calendar year 1983 were derived from STATLANT 21B reports received by the Secretariat from the following countries or components: Canada (Maritimes), Canada (Newfoundland), Canada (Quebec), Cuba, Denmark, Faroe Islands, Federal Republic of Germany, France (Metropolitan and St. Pierre and Miquelon combined), German Democratic Republic, Great Britain, Greenland, Italy, Japan, Norway, Poland, Portugal, Spain, Union of Soviet Socialist Republics (USSR), States of America (USA) and South Korea. Bulgaria, Iceland and Romania reported no fishing activity in the Northwest Atlantic in 1983. Fishery statistics accruing from cooperative arrangements between coastal states (Canada and USA) and several countries in 1983 have been incorporated in the Tables 1 to 5, and treatment of these data are explained in the next section.

Fishery Statistics from Cooperative Arrangements

Following the extension of jurisdiction over fishery resources to 200 miles by coastal states in January 1977, the development of cooperative arrangements between Canada and several countries resulted in confusion regarding responsibility for reporting fishery statistics accruing from such arrangements. Problems associated with double-counting and under-counting of catches were anticipated and discussed in August 1977 at the Ninth Session of the CWP (Coordinating Working Party on Atlantic Fishery Statistics), which agreed that in all instances the flag of the vessel should be the determining feature that establishes the country to whose national production the catches and landings should be allocated, regardless of fishing area or point of landing, and that this policy should only be overridden when it is obvious that the wording of chartering and joint operation contracts indicates otherwise or when the interrelations are too complicated to settle (*FAO Fish Rep.*, No. 197, page 10). Further discussion on this matter at the Tenth Session of the CWP in July 1982 (*FAO Fish Rep.*, No. 242, pages 24-25) resulted in reiteration of the basic concept, with some clarification. This policy has been followed in the preparation of fishery statistics for 1983 (and preceding years, where relevant), insofar as it has been possible to obtain information on joint venture operations from the coastal states and to have the data verified or amended, where appropriate, by the countries involved.

Countries whose vessels fished within the 200-mile zone through cooperative arrangements with Canada in 1983 were Faroe Islands, Denmark, Norway, Portugal and USSR, and those operating under cooperative arrangements with USA were Italy and German Democratic Republic. The catch and effort data from these cooperative arrangements have been incorporated in the national statistics of the flag states involved, and are included in Tables 1 to 5 of this section. However, for possible use in the management of catch quotas, the joint-venture data for the various countries involved are listed separately in Table 6.

Data Presentation

Tables 1 to 3 in this section are presented in the same formats as those in preceding volumes of the Statistical Bulletin and contain the statistics on nominal catches in varying degrees of detail. Table 4 contains the nominal catches by month of selected species for which conservation measures have been established. Table 5, containing monthly catch and effort statistics, is presented in the new format which was adopted at the September 1980 Meeting of the Scientific Council.

Users of the Bulletin should note the change relating to the use of a revised set of standard abbreviations for countries in Tables 2, 3, 4 and 5. These, together with abbreviations used for fishing gears, main species, months and tonnage classes, are defined in the section entitled "Definitions and Abbreviations" (pages 9-16).

PART III

Sealing Statistics, 1983

This section contains two tables of basic data on harp and hood seal catches (Table 1) and hunting effort (Table 2) by area, catching method and country for the calendar year 1983. Statistics were reported by two countries, namely Canada and Greenland.

Abbreviations and Definitions

Abbreviations for Countries

Can (M)	—	Canada (Maritimes)
Can (N)	—	Canada (Newfoundland)
Can (Q)	—	Canada (Quebec)
Greenl.	—	Greenland

Common and Scientific Names

Harp seal	—	<i>Pagophilus groenlandicus</i>
Hooded seal	—	<i>Cystophora cristata</i>

Definition of Harp Seal Age Categories

Whitecoat	—	less than 2 weeks old with unmoulted white fur (lanugo)
Ragged Jackets	—	2-3 weeks old
Beater	—	more than 3 weeks old
Bedlammer	—	1 year or older with spotted pelt, roughly equivalent to immature animals
Old harp	—	animals with conspicuous saddle mark on back and sides, roughly equivalent to mature animals

Definition of Areas

Front	—	Subareas 2 and 3, excluding Div. 3P
Gulf	—	Subarea 4, including Div. 3P

Explanation of Effort Terms

Engine HP	—	brake horsepower
Landsmen	—	shore fishermen, including those using small vessels or aircraft
No. of men	—	total number in crew if "vessel" and number of hunters if "landsmen"
Days absent	—	number of days absent from port including the day the vessel sails but not the day of landing
