SECOND ANNUAL MEETING - SEPTEMBER 1980

Request for further advice on mesh size for cod and redfish in Division 3M

The Fisheries Commission requests the Scientific Council, at its next meeting when Flemish Cap problems will be considered, to provide advice on the mesh size that would maximize yield-per-recruit at the  $F_{0.1}$  level for cod and redfish in Div. 3M and on the implications to changes in long-term yield of adopting such a mesh size, irrespective of net material.
